Otoport

OAE / ABR

Otoport will meet your needs whatever your clinical requirements, size or type of screening program. It's a compact, easy to operate handheld device featuring unrivalled adaptability.

The Otoport brings together over 35 years of expertise in one portable device. Otodynamics was the first OAE company and we pioneered methods that set the OAE gold standard. The reliability and performance of Otodynamics' ABR screening algorithm has been proven in universal newborn hearing screening programs around the world.

For screening, select the Otoport Lite model with the test combination you prefer. From infant screening with ABR, OAE, or ABR+OAE to Paediatric screening with OAEs. High specificity relies on good testing conditions and here the Otoport Lite scores by assessing the testing environment and providing essential feedback.

For investigations, the Otoport has powerful clinical analysis models with fully customisable OAE protocols. Each test is saved with the actual physiological response. Choose the Otoport Advance model for clinical research and access to selected research functions for IRB approved projects.

HIGHLY ADAPTABLE
Meeting your screening & clinical needs

FULLY CUSTOMISABLE
Up to 16 protocols available

ANY TEST COMBINATION

CHOOSE YOUR OTOPORT MODEL

Every Otoport has the same hardware, ensuring reliability, uniform performance, and upgradability. Three distinct firmware versions provide levels of functionality tailored to three application areas.

The LITE model

LITE *Fast | Easy | Clear*

The Otoport Lite has been expertly designed to be flexible, simple, easy-to-use, and fast, while meeting all your screening needs from newborn screening through to paediatric assessments. Screeners are aided to identify problems by on-screen messages, to improve their techniques, and thereby improve overall performance of the program. Choose any one or a combination of DPOAE, TEOAE and ABR tests Upgrade later with a QR license activation. Each test type delivers reliability and performance with ultra fast, accurate and clear results.

Includes Lite model

FLEXI *OAEs designed for the clinic*

The Otoport Flexi has exactly what's needed for clinical OAEs at a highly competitive price. Six powerful customisable protocols, including 12 frequency 1-8kHz DPgram with normative range markers. Clinical OAEs have real clinical value with adults and older children, alerting you to the possibility of both conductive and cochlear losses. The Otoport Flexi includes all the Otoport Lite functions and beyond. With one touch, the Otoport Flexi can be configured for adult, paediatric or infant screening applications.

Includes Lite & Flexi model

ADVANCE *With extended OAE functions*

Benefit from the full range and power of the Otoport Advance. Boasting 16 fully customisable protocols, the Otoport Advance model will perform in the most demanding of clinics. Incorporating all the functions of the Otoport Lite and Flexi models, the Advance has three additional investigational OAE functions. DP ZOOM explores DP-gram features at up to 100 points per octave resolution. Stimulus levels are configurable in 1dB steps. DP GROWTH provides multi stimulus level DPOAE measurements at any frequency 1-8kHz. MULTI TEST function linking up to 4 loop-able test protocols allowing you to build a sequence of different DP and/or TE tests.

FEATURES COMMON TO ALL MODELS

Otoport LITE

FAST | EASY | CLEAR

OAE / ABR

The Otoport Lite comes pre-configured for screening efficiency and arrives ready to go. Whether you choose AABR or OAE as your primary screen, Otoport requires minimal training to achieve fast and clear results. To meet your special requirements, you can also customise test protocols and use OAE and AABR in combination.

With Otoport you get multiple days of use between battery charges. Its robust design, large onboard searchable patient database and detailed response capture, means Otoport can meet all your screening and program management needs.

UNIQUE DISTRACTION DISPLAY

When conducting challenging pediatric OAE assessments, the Otoport has 6 visual distraction animations that helps to keep the child quiet and engaged. The child is encouraged to remain quiet as they watch the onscreen cartoon gradually filling with colour. If noise is detected during the test, the colours quickly fade and return when the child settles creating positive reinforcement.

STREAMLINED TESTING

Use the programmable Work List feature to plan your screening workload.

PAUSE CONTROL

Pause and resume a test at any time to check probe fit, adjust the environment or to allow time to settle a patient.

CHOOSE YOUR TEST TYPES

DP OAE

✓ INFANT ✓ PAEDIATRIC

Tests 4 frequencies (2,3,4,6kHz) with a choice of 3 preset stimulus levels, optimised for screening. Rapidly test infants and pre-school children.

TE OAE

✓ INFANT

Tests up to 5 half octave frequency bands (1,1.5, 2, 3 and 4kHz) using our 'Quickscreen' click stimulation at 84dB SPLpe, proven in the worlds most extensive screening trials. TEOAEs are fast and effective for infant screening.

AABR

✓ INFANT

Tests using short Chirp stimulation, configurable between 35 and 45dBnHL designed for newborn screening. Results are fast and with continuous monitoring of Fsp and ABR waveform shape to ensure that a 'clear response' is a true response.

1. QUICK INPUT

Effortlessly enter patient details via QR code scanning*, worklist or enter manually.

2. EASY FIT

Otodynamics right angled probe can be used for both OAE & AABR testing. Its unique design makes it easy to achieve a good probe fit.

Ear cups can also be used with the Otoport. However, using the probe inserted into the ear for AABR can reduce consumable costs. Otoport can perform single or dual probe testing.

3. SUPERIOR PRE-TEST ANALYSIS

See test progress every step of the way, automated alerts are displayed if changes in stimulus levels, impedance, or excess noise that may effect the test.

For AABRs, superior pre-test environment checks provides separate powerline & infant noise indicators and quickly identify if a specific electrode has high impedance.

4. CLEAR TEST PROGRESSION

See test progress every step of the way, automated alerts are displayed if changes in stimulus levels, impedances, or excess noise levels that may effect the test.

For AABR there is continuous monitoring of Fsp and ABR waveform shape to ensure that a 'clear response' is a true response.

5. FAST ABR RESULT

The Otoport Lite is fast, easy and clear. With just 2 key presses**, achieve a clear response.

OAE in as little as 7 seconds
AABR average pass in 80 seconds

6. SMOOTH DOWNLOAD

Data transfer is quick and easy. Simply plug-in and tests can be automatically downloaded to Otolink PC software via wired or wirelessly

* Hospital QR and barcoded IDs vary. The specification of your facilities QR/Barcode format is required to confirm compatibility.
** Quick Start option enabled

Otoport **FLEXI**

OAEs DESIGNED FOR THE CLINIC

The Otoport Flexi model provides fast and accurate DPOAE recordings on adults, children, infants, and much more with extensive configurability and expandability.

At the heart of the Flexi is a 12 frequency 1-8kHz DPgram with ¼ octave resolution with 5 stimulus formats. Smart frequency sweep management optimises test time and settable normative range markers assist your interpretation of the results.

You can create customised DPOAE test protocols for special requirements. Use multiple levels to record cochlear function to high accuracy e.g. for the detection of changes with therapy or for monitoring cochlear status over time.

Every test stimulus is optimised using our unique 'in-the-ear calibration' process. Test details and responses are saved to the onboard patient records database, which you can search and review on the device. Or transfer results to PC, via USB or Bluetooth download, for more detailed examination with the included Otolink PC software.

The Otoport Flexi includes all the OAE functions of the Otoport Lite with increased protocols and customisation.

KEY FEATURES

DP 12 FREQUENCY

Two customisable 1-8kHz DP-gram protocols with ¼ octave resolution and 5 selectable stimulus formats. Smart frequency sweep management optimises test time and settable normative range markers assist interpretation.

DP OAE

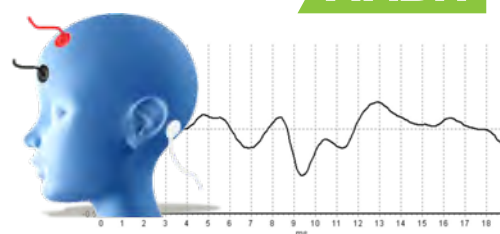

Two 1-8kHz customisable protocols with Half octave line-graph and frequency circle display.

ADD TE OAE

Increase the depth and power of your clinical investigations by adding our gold-standard 1-6kHz TEOAE analysis with half octave analysis between 800-6kHz and waveform display.

ADD ABR

You can add ABR infant screening to the Otoport Flexi model, offering two ABR protocols customisable between 35 - 45dBnHL. Extend to 60dBnHL for non-screening training/research use. Display the emerging ABR waveform test in real time and detailed examination post test.

Otoport **ADVANCE**

WITH EXTENDED OAE FUNCTIONS

Top of the Otoport range, the 'Advance' model is an exceptionally powerful handheld auditory investigation device.

The Advance has all the features and options of the Otoport Flexi plus three additional investigational test modes: DP Zoom, DP Growth and MULTI-TEST. TEOAE is also included as standard with additional high-resolution spectral analysis from 0.5 to 6kHz.

Take advantage of all Advance's sophisticated tools to go beyond routine clinical DPOAE recordings towards clinical research investigations. Capture detailed test information including physiological responses for in-depth analysis in our Otolink PC software, which can also export data for research.

Otoport records high resolution DPOAEs from 0.5kHz to 8kHz. Sweep frequency automatically or under manual control to focus on difficult frequencies. Achieve unrivalled frequency resolution with DP Zoom. Explore cochlear function with input-output measurements using the Advance DP Growth test. Link up to 4 tests together in a repeatable test sequence using the MULTI-TEST macro programmer.

KEY FEATURES

DP ZOOM

Allows you to investigate a specific range of frequencies from 0.5 to 8kHz in high resolution of up to 100 pts/oct. Explore details of DP-gram features such as notches to establish their true extent and depth. Export data for analysis and research.

DP GROWTH

Select any frequency and see how DPOAE intensity grows with stimulus level. Stimuli are optimised by the 'scissor' formula. Plot either dB/dB or uPa/dB growth. Automatic regression analysis provides slope and DPOAE threshold data for sufficiently linear uPa growth results.

MULTI TEST

Four fully customisable loop-able test protocols. Allows you to build a sequence of DP and/or TE tests at different levels. Collect vast amounts of data automatically.

ADD ABR

You can add ABR infant screening to the Otoport Advance model, offering two ABR protocols customisable between 35 - 45dBnHL. Extend to 60dBnHL for non-screening training/research use. Display the emerging ABR waveform test in real time and detailed examination post test.

Otoport

COMMON FEATURES ACROSS ALL MODELS

SCREENING STREAMLINED

Use the programmable Work List feature to plan your screening workload.

LARGE STORAGE

Store up to 2000* tests listed in chronological order with on-screen test result summary table.

PAUSE TESTING

Pause and resume testing at any time to address any issue impacting a test, such as noise, probe or electrode fitment.

QUALITY ASSURANCE

Dedicated QA test area with optional enforced daily QA. View QA history with on board Probe test facility and Probe ID tracking.

ACCURACY

Every test starts with automated 'in-the-ear' calibration ensuring accurate results.

ADMIN CONTROL

Create multiple user profile logins with password protection and Admin management control and security.

INFORMATIVE

With automated monitoring of the testing environment. Helpful on-screen notification is provided advising of any issue impacting a test such as noise, probe or electrode fitment.

NUMERICAL DISPLAY

Numerical table of test data. Signal, noise and SNR.

UNIQUE DISTRACTION DISPLAY

When conducting challenging pediatric OAE assessments, the Otoport's has 6 visual distraction displays that help to keep the child quiet and compliant. The child is encouraged to remain quiet as they watch the onscreen cartoon gradually fill with color. If noise is detected during the test, the colors quickly fade and return when the child settles, engaging the child by positive reinforcement.

SCANNING

Built in QR/Barcode reader. Effortlessly scan patient details for easy data input or to search existing patient records**.

Scan user details for login access.

To upgrade Otoport or to tailor the test mode for specific applications, simply scan a different QR code license***. With the Otoport you are not limited to one installation.

Easy push pull probe connection. Choice Single or dual probe testing

CONNECTIONS

Electrode cable

Transfer data to PC via Bluetooth® or wired connection.

PROBE & TIPS

The Otodynamics XPD probe is designed to make daily maintenance and cleaning simple and quick. The new TIP HOLDER is fitted over the probe body and locates precisely with the sound ports when the TIP HOLDER tabs are clicked securely on the probe body.

OTOLINK PC DATA MANAGEMENT SUITE

Download test results wirelessly or via USB from the Otoport or when docked in the docking station. Test details can be quickly reviewed, printed and archived. Printing reports directly to a PDF file is available. Data can be exported, for example, to OZ, HiTrack, GDT, Noah** or as CSV file. Patient Work Lists can be uploaded to the Otoport, assisting with managing workloads in busy environments. Otolink also provides access to firmware and application updates from Otodynamics via the internet. Compatible with Windows 10 and 11.

The XPD probe body benefits from the inclusion of an internal filter that fully protects the microphone and loudspeaker ports.

* dependent on Otoport device.
 ** Hospital QR and barcoded IDs vary. The specification of your facilities QR/Barcode format is required to confirm compatibility.

ADDITIONAL OPTIONS for your Otoport

ADD BINAURAL TEST
Seamless testing both ears reduces patient disturbance.

ADD MINI PRINTER
Wireless, compact, fast print time, numerical and band pass data. Battery powered.

Noah 4
ADD NOAH
To the Otolink PC Data Management.

ADD CARRY CASE
To store and transport the Otoport and all related items.

ADD SCANNER
Built in QR/Barcode reader. Effortlessly scan patient details for easy data input or to search existing patient records*.

Scan user details for login access. To upgrade Otoport or to tailor the test mode for specific applications, simply scan a different QR code license**. With the Otoport you are not limited to one installation.

Otoport

WHAT'S INCLUDED

Otoport
2 YEARS
INSTRUMENT WARRANTY

- OAE probe with cable clip
- Probe test cavity
- USB download cable
- Docking station
- Sample ear tip pack
- Sample infection control sleeve
- Otolink PC software
- Electrode Cable (with ABR option)
